

# TOP 10 IT Security Checklist

## Tips

Email Domain Protection,  
SPF, DKIM and DMARC

1

Ensure Email Domain Protection, SPF, DKIM and DMARC are enabled. Check out our security blog to find out more. [Email Security: Stop Sender Fraud with SPF, DKIM & DMARC](#)

\$tR0n9 Pa\$\$w0rDs!

2

Have a strong password policy across your organisation. Check out our blog post to see what makes a great password and how often they should be changed. [What makes a great password?](#)

Multi Factor Authentication  
(MFA)

3

Passwords alone are no longer enough to withstand hacking tools which is why we recommend Multi-factor-authentication. Check out our blog post to find out more. [Why use multi-factor-authentication?](#)

Work from home controls

4

No matter how good your IT policy, it is crucial to ensure controls are in place for how you access the data. Both what device is used and where can significantly impact your data security.

Dark Web Scanning

5

Protect your credentials with a monthly Dark Web Scan. This will show up any hacked credentials for sale on the Dark Web. Download our 'Year in Breach' Whitepaper. [Year Under Attack - FREE Whitepaper](#)

Document Based  
Permissions

6

Protect data outside of your office by attaching permissions to the documents rather than the location. This means you can control the access no matter where it is.

Impossible Travel  
Detection and Protection

7

Impossible travel keeps track of where users are located so it can identify potential security breaches. [Impossible Travel: The Security Control Your Network Is Missing](#)

Phishing Testing

8

Trained and aware employees are critical to securing an organization. Regular phishing tests and training prepares employees to recognize attacks. [BullPhish Testing](#)

Microsoft Secure Score

9

Check out our blog post which explains Microsoft Secure Score and why it's so essential for businesses. [Microsoft Secure Score](#)

CyberEssentials  
Certification

10

Find out more about how a Cyber Essentials Certification can benefit your business. [What is Cyber Essentials?](#)
